URP 3182: GIS and Remote Sensing Studio

**Project-02**

You are given the following spatial datasets with BTM Projection for Rajshahi City Corporation (RCC)

- a. Education Facilities
- b. Ward Boundaries

1. Prepare RCC boundary (polygon) using spatial data of Ward Boundaries.
2. Taking 500m buffer as standard service area of primary school,
  - (a) Calculate percentage of only served area, overserved area and unserved area within the RCC area.
  - (b) Calculate percentage of served area, overserved area and unserved area within the RCC area against each ward with reference to total RCC area
  - (c) Calculate percentage of served area, overserved area and unserved area within the RCC area against each ward with reference to Ward area.
  - (d) Calculate the percentage of population for underserved area, overserved area and unserved area within the RCC area.
  - (e) Calculate the percentage of population for underserved area, overserved area and unserved area against each ward with reference to total RCC area
  - (f) Calculate the percentage of population for underserved area, overserved area and unserved area against each ward with reference to Ward area.
  - (g) Calculate the percentage of population within overserved area based on the availability of services like double served, triple served and the like.
